

**NEW DETECTORS  
FOR THE BIO-RESONANCE ACCORDING TO PAUL SCHMIDT**

[www.rayonex.de](http://www.rayonex.de)

# Corporate Philosophy

Part of the corporate philosophy of Rayonex is to improve and intensify the application of the bio-resonance according to Paul Schmidt constantly. One crucial aspect is the effectiveness of the way the frequency spectra of our bio-resonance devices are passed on to the organism. If you want to test or harmonise mercury pollution in the head area, for instance, it would be blatantly obvious to test and harmonise particularly effectively by directly applying the frequency spectra to the head area. This is not limited to the head area alone, just think of arthritis in the joint of the wrist or gout in the foot area. Especially if the problem is connected to bacterial, viral or parasitic pollution, a locally precise application of the frequency spectra is particularly beneficial.

# Newly Designed Special Fabric

Now, a completely new generation of detectors was created. Accurate tests and harmonisation call for materials which are unable to store the oscillation spectra of patients. We used a special linen and wove an extremely fine stainless steel wire into the fabric (patent pending).

This wire is twisted into the carrier material, making it enormously resilient. Additionally, the stainless steel mesh generates **no** oxides like many other metals, such as copper.

# Washable

One of the main assets of the new detectors – they can be washed at 60° C. After the fabric is woven, it is heat-set to prevent the detectors from shrinking while washing. You can also iron the fabric.

# CE -Certification

As soon as you connect a bio-resonance device to a detector which has no CE certificate, your device automatically loses its operating license. Without exception, the new-dermatologically tested - detectors belong to the group of medicinal products, grade I. They have been tagged with the CE certificate to prove their suitability for the combined application with the bio-resonance

devices according to Paul Schmidt. Using a press stud and a special adapter, the detectors can be safely linked to the already existing cables of your device.

# Customer-Oriented

We have asked more than 500 users about the detectors most badly needed in practice. After precise evaluation of the results of this customer survey, the new generation of detectors for the bio-resonance according to Paul Schmidt was designed.

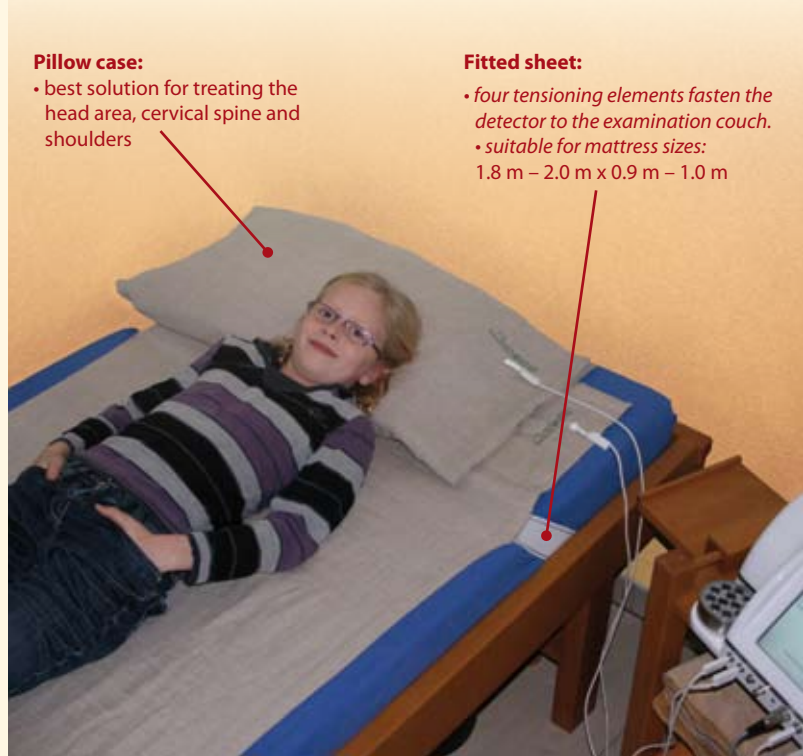

**By the way:** Most of the persons questioned for this survey asked for a fitted sheet detector, to be used conveniently while lying down!

**Fabric detector: pillow-case 80 cm x 80 cm  
with 3 m long connection cable**

Order number: 30320

**Fabric detector: fitted sheet detector 1.85 m x 0.8 m  
with 3 m long connection cable**

Order number: 30323

**Pillow case:**

- best solution for treating the head area, cervical spine and shoulders

**Fitted sheet:**

- four tensioning elements fasten the detector to the examination couch.
- suitable for mattress sizes:  
1.8 m – 2.0 m x 0.9 m – 1.0 m

**Fabric detector: blanket 2.0 m x 1.80 m  
with 3 m long connection cable**

Order number: 30324

**Blanket:**

- frequency spectra can be applied to the entire body.
- universally applicable!

## Fabric detector: Hood with two 1.5 m connection cables and an additional detector

Order number: 30326

## Fabric detector: additional detector for hood

Order number: 30327

**Fabric detector: chest and abdominal region**  
**1.5 m x 0.5 m with 1.5 m long connection cable**

Order number: 30328

- can be adapted optimally with its Velcro strips
- fits closely around the back, chest and abdominal region

**Fabric detector: mitten  
with 1.5 m long connection cable**

Order number: 30330

- fits almost any hand size
- ideal for joints, muscles and tendons

**Fabric detector: short sock  
with 1.5 m long connection cable**

Order number: 30331

• ideal for joints, muscles and tendons

• with Velcro strip, can be adapted  
to the foot individually

**Fabric detector: 30 cm long, with Velcro strip and 1.5 m long connection cable**

Order number: 30335

**Fabric detector: 50 cm long, with Velcro strip and 1.5 m long connection cable**

Order number: 30336

• application example 30 cm long fabric detector

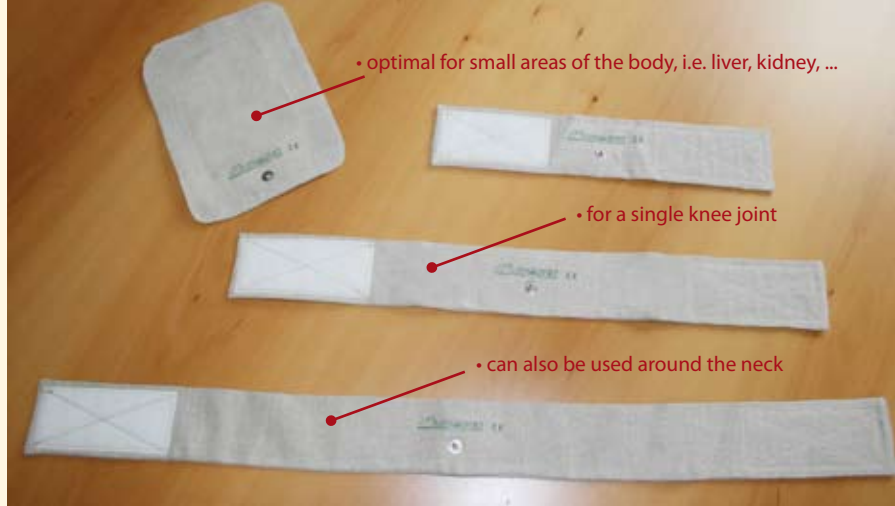

**Fabric detector: 70 cm long, with Velcro strip and 1.5 m long connection cable**

Order number: 30337

**Fabric detector: 22 cm x 17 cm with 1.5 m long connection cable**

Order number: 30340

**Fabric detector: horse blanket with bag  
and 1.0 m and 5.0 m long connection cables**

Order number: 30360

• strap does not belong to the delivery volume

**Fabric detector: for small dogs  
with 5.0 m long connection cable**

Order number: 30365

**Fabric detector: for large dogs  
with 5.0 m long connection cable**

Order number: 30366
